## PROFILE

As a recent postgraduate student from the University of Kent, I have gained a deep understanding in a wide array of audio technology based disciplines. The primary focus of my work throughout and following university centres upon programming for the purposes of sound art and instrument design, with a particular interest in generative composition and interactive music systems. Passionate, committed and with a genuine thirst for knowledge, I am looking to secure a position in the media industry, within a company which will not only challenge me professionally, but will also allow me to further develop and deepen my understanding of audio technology.

## HOBBIES

- Guitar Luthier
- DIY Pedal Effects
- Videogames and Virtual Reality
- Analog Photography
- Art and Illustration
- 3D Printing and Design
